Host a Website on Amazon S3

Kyah Owens

Introducing Today's Project!

Project overview

In this project, I will demonstrate... I'm doing this project to learn how to use Amazon S3 (which stands for Amazon Simple Storage Service) to host a website.

How I Set Up an S3 Bucket

What I did in this step

In this step, I will create a storage space for my website files

How long it took to create the bucket

Creating an S3 bucket took me...10-15 minutes

Region selection

The Region I picked for my S3 bucket was... ohio because it was closest.

Understanding bucket name uniqueness

S3 bucket names are globally unique! This means...no other AWS account in the world will be able to use my bucket's name.

Buckets

General purpose buckets

All AWS Regions

Directory buckets

General purpose buckets (1) Info

↺

Copy ARN

Empty

Delete

Create bucket

Buckets are containers for data stored in S3.

Find buckets by name

< 1 > ⚙

	Name ▲	AWS Region ▼	Creation date ▼
☐	nextwork-website-project-kyahowens	US East (Ohio) us-east-2	May 21, 2026, 15:53:00 (UTC-04:00)

Upload Website Files to S3

What I did in this step

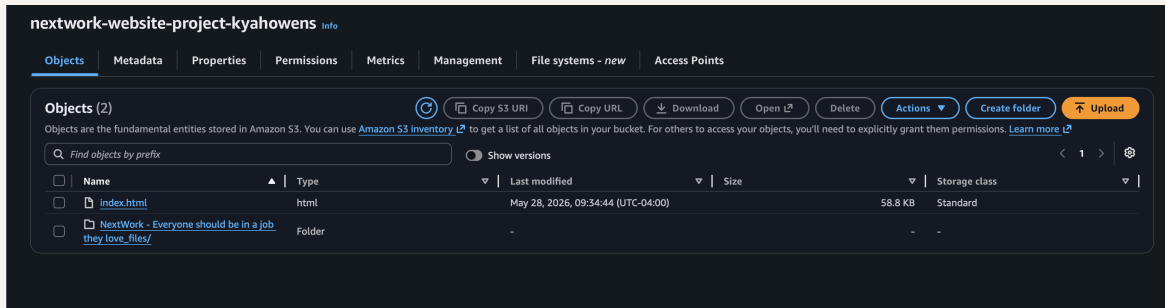

In this step, I will... download an HTML file and zip file because...i need to upload it into my S3 bucket.

Files I uploaded

I uploaded two files to my S3 bucket - they were...index HTML file and a zipped folder

How the files work together

Both files are necessary for this project as...HTML is to structually setup the website and the folder contains all the images and etc to insert into the website

Static Website Hosting on S3

What I did in this step

In this step, I will... configure my S3 bucket for static website hosting because...i need to be able to visit my public website link.

Understanding website hosting

Website hosting means...making your website publicly available on the internet so anyone can visit it!

How I enabled website hosting

To enable website hosting with my S3 bucket, I...enable static web hosting in the static website hosting panel at the bottom of the properties tab then select hosting type and enter the index .html

Access Control Lists (ACLs)

An ACL is...a set of rules that decides who get access to what resource. I enabled ACLS so i can control who can access and do things with my website files

Edit static website hosting info

Static website hosting

Use this bucket to host a website or redirect requests. [Learn more](#)

Static website hosting

☐ Disable

☒ Enable

Hosting type

☒ Host a static website

Use the bucket endpoint as the web address. [Learn more](#)

☐ Redirect requests for an object

Redirect requests to another bucket or domain. [Learn more](#)

ⓘ For your customers to access content at the website endpoint, you must make all your content publicly readable. To do so, you can edit the S3 Block Public Access settings for the bucket. For more information, see [Using Amazon S3 Block Public Access](#)

Index document

Specify the home or default page of the website.

Error document – optional

This is returned when an error occurs.

Redirection rules – optional

Redirection rules, written in YAML, automatically redirect webpage requests for specific content. [Learn more](#)

Bucket Endpoints

Understanding bucket endpoint URLs

Once static website is enabled, S3 produces a bucket endpoint URL, which is...just like a regular website URL. It lets people visit your S3 bucket's files as a website.

What I saw when I tested the endpoint

When I first visited the bucket endpoint URL, I saw... The reason for this error was...the HTML and images files I uploaded are private by default. This default setting helps keep your account's data secure.

403 Forbidden

- Code: AccessDenied
- Message: Access Denied
- RequestId: PV3FJXBYWZDJ9S3Q
- HostId: XIMH0x4AjDa5aTou8+gcSkRR5Q7HzzGUK/4wPqwASjYVG5P+qN5ScAON0qYzInAqMxqCPYAte3Xw=

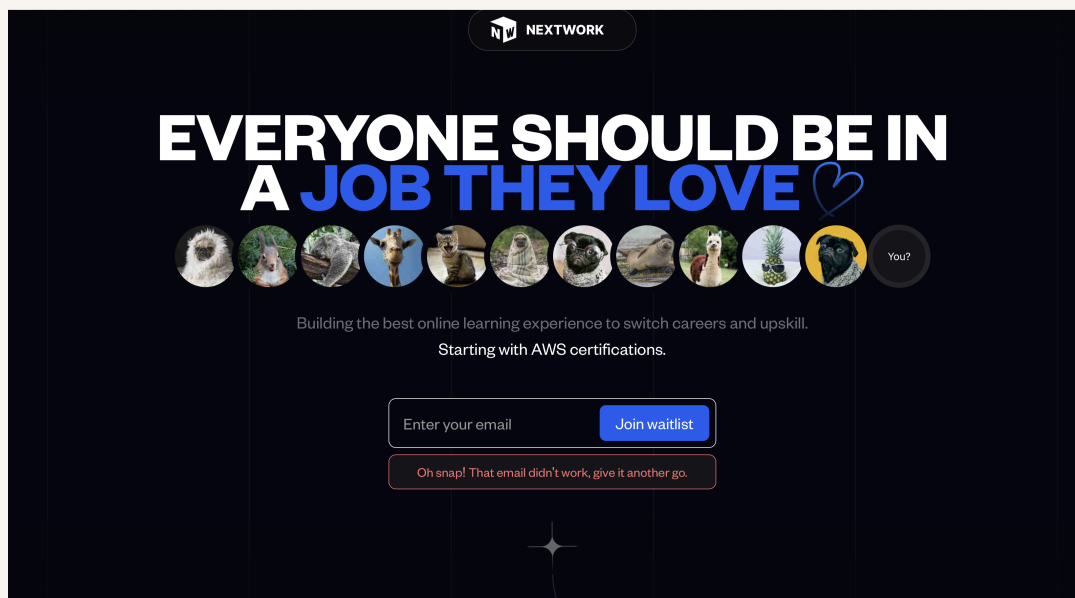

Success!

What I did in this step

In this step, I will... make my websites files in S3 publically accessible because...i need to see my website live on the internet.

How I resolved the 403 error

To resolve this 403 Forbidden error, I...went to object page , selected the file then made them public using ACLs

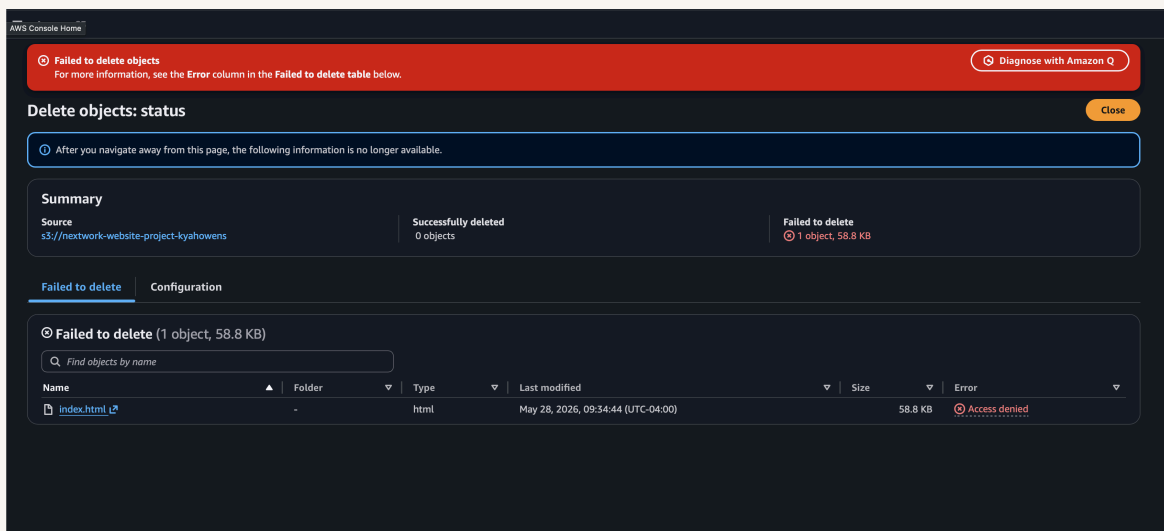

Bucket Policies

What I did in this extension

In this project extension I'm about to... Set up a bucket policy and I'm doing this so that... it stops people from deleting my index.html file.

Understanding bucket policies

An alternative to ACLs are bucket policies, The benefit of using bucket policies is... controlling access for the entire bucket at once while ACLs are useful for... controlling access for individual objects (e.g., making just one file public while keeping others private)

What my bucket policy does

My bucket policy makes everything public, or blockes all deleted actions tested this by...setting up a bucket policy that stops people from deleting your index.html file and saw...that i wasnt able to delete the file.
